

Rotor Panel Spare Part Number Changes

Issue	Date	Changes
1	04/07/2025	Technical parts bulletin created

Stripping rotor panel spare part numbers have changed recently. See on page 2 a list of the original spare panel part numbers and the new.

New and old panels can be mixed on a rotor assembly.

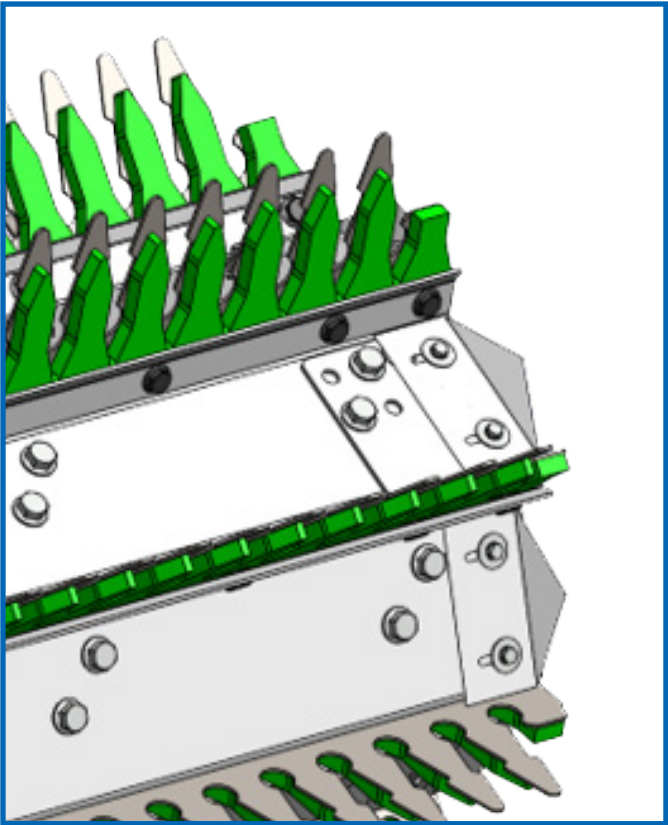

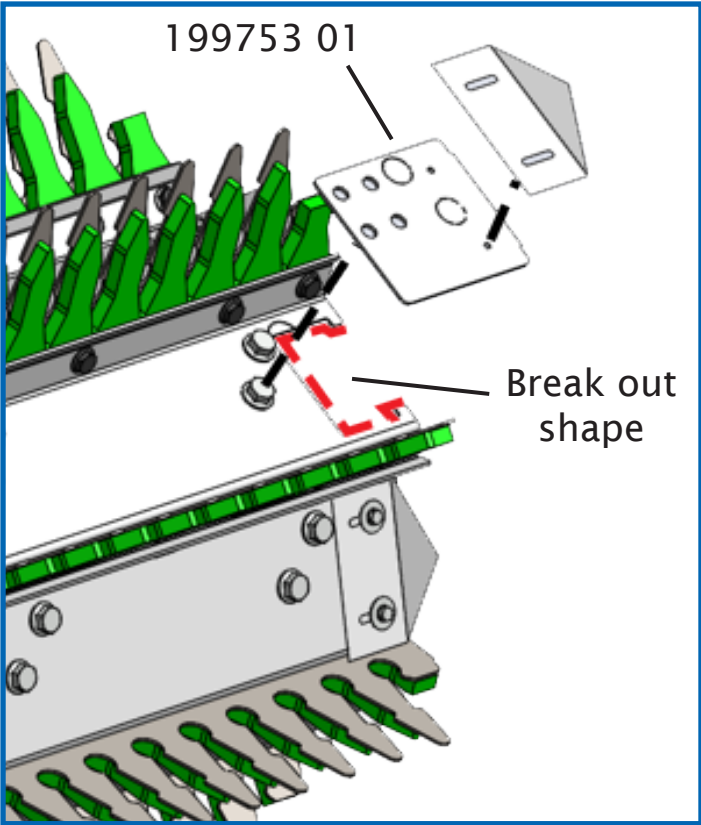

The new spare parts have various knock out holes and sections so they can be broken out to produce the exact style of panel that is being replaced.

They also have an additional end knock out section that will assist with cleaning out debris that could get into the end of the rotor assembly.

If this facility is wanted on pre 2025 headers, then break out both ends on 2 panels and fit panels on directly opposite faces of the rotor assembly.

Additional cover plates (Part no. 199753 01 x 4 / rotor) will also be required to cover the clean out holes.
